

■ FSL BUSINESS CONFIGURATION — VERIFIED SAFE

Configuration	Status	Notes
Scheduling Policies	■ Safe	New ESO objectives are opt-in only
Work Rules	■ Safe	New Appointment Insights API is diagnostic only
Service Objectives	■ Safe	2 new objectives added; existing untouched
Operating Hours	■ Safe	Not mentioned in Summer '26
Global Optimization schedules	■ Safe	New opt-in features; existing runs unaffected
Resource Absences	■ Safe	Not mentioned in Summer '26
Skills / Skill Requirements	■ Safe	Not mentioned in Summer '26
Service Territories	■ Safe	Not mentioned in Summer '26
FSL Permission Sets	■ Safe	Not mentioned in Summer '26
SAML SSO	■ Safe	Verified in live org: 2 SamlSsoConfig records → already on multi-config framework

■ BUSINESS ITEMS — Action Required

B1. Dispatcher Tab Renamed

THIS WEEK

Business Impact

The 'Field Service' tab dispatchers use daily is now called 'Classic Dispatch Console.' No warning was given. Dispatchers will be confused.

Verified

✓ Confirmed in Summer '26 Field Service release notes. Affects: Alger, Hartman, Kalenda, Harrington, Carroll.

Fix

1. Send message to all 5 dispatchers: 'The tab called Field Service is now Classic Dispatch Console — same tool, new name.'
2. Update any SOP or training document that references the 'Field Service' tab.

How to verify: Log into SF as a dispatcher → confirm 'Classic Dispatch Console' tab is visible and opens the Gantt normally.

Owner

FSL Admin / Business Admin

B2. Integration User — Profile Visibility

THIS WEEK

Business Impact Summer '26 restricts users from seeing other users' profile names. The integration user running all API queries may return blank profile data, silently breaking data flows.

Verified ✓ Integration user apiintegration@nyaaa.com confirmed from running app environment (SF_USERNAME env var).

Fix

1. Setup → Users → Users → search apiintegration@nyaaa.com
2. Click the user → go to their Profile → Edit
3. Under System Permissions → enable View All Profiles → Save

How to verify: Run in Developer Console:

```
SELECT Id, Profile.Name FROM User WHERE IsActive = true LIMIT 5
```

How to verify: If Profile.Name returns values = working. If all null = permission not yet active.

SF Admin

■ TECHNICAL ITEMS — Action Required

T1. FleetPulse Authentication — BREAKS October 2026

BY OCTOBER 2026

Business Impact Complete FleetPulse outage. All dispatch dashboards, metrics, and accounting audit go dark.

Verified ✓ FSLAPP/backend/sf_client.py line 171: grant_type='password' — username-password OAuth flow confirmed.

Fix

1. [SF Admin] Setup → App Manager → FSLAPP Connected App → Edit → OAuth Policies → enable Client Credentials Flow → set Run As = apiintegration@nyaaa.com → Save
2. [Developer] sf_client.py lines 169-181: replace payload to use grant_type='client_credentials' with only client_id and client_secret. Remove username, password, security_token fields entirely.
3. [Azure Admin] Azure Portal → fslapp-nyaaa → Configuration → Application Settings → delete SF_USERNAME, SF_PASSWORD, SF_SECURITY_TOKEN → Save

```
curl http://localhost:8000/api/health
```

How to verify: Expected: salesforce.errors = 0, breaker_open = false, total_calls > 0

Owner

SF Admin + Developer + Azure Admin

T2. Mulesoft aaa-wcny-genesys-sf-bulk-papi — BREAKS October 2026

BY OCTOBER 2026

Business Impact Genesys call centre agent IDs and emails stop syncing to Salesforce User records.

Verified ✓ src/main/mule/genSfGlobalConfig.xml line 39: salesforce:oauth-user-pass-connection confirmed.

Fix

1. Open salesforce-ers-sys/src/main/mule/global.xml lines 33-39 — use as JWT template (already working).
2. In genSfGlobalConfig.xml line 39: replace salesforce:oauth-user-pass-connection with salesforce:jwt-connection using the same structure, with this app's Connected App credentials.
3. Store all credentials as `#{secure::}` references — not plaintext.
4. Deploy to CloudHub.

How to verify: After deploy → trigger a Genesys agent sync event → check CloudHub logs for successful authentication → no CONNECTIVITY or INVALID_SESSION errors.

Owner Mulesoft Developer

T3. Mulesoft aaa-wcny-salesforce-lead-import-app — BREAKS October 2026

BY OCTOBER 2026

Business Impact Lead imports from external sources into Salesforce stop completely.

Verified ✓ src/main/mule/global.xml line 17: salesforce:oauth-user-pass-connection confirmed.

Fix

1. Open salesforce-ers-sys/src/main/mule/global.xml lines 33-39 — use as JWT template.
2. In global.xml line 17: replace salesforce:oauth-user-pass-connection with salesforce:jwt-connection using this app's Connected App credentials.
3. Store credentials as `#{secure::}` references.
4. Deploy and test.

How to verify: After deploy → trigger a test lead import → check CloudHub logs confirm no INVALID_SESSION errors → verify test lead record created in Salesforce.

Owner Mulesoft Developer

T4. Mulesoft aaa-wcny-cx360-papi — BREAKS October 2026

BY OCTOBER 2026

Business Impact CX360 customer data stops flowing into Salesforce.

Verified ✓ src/main/resources/properties/common-config.properties lines 191-196: active (uncommented)
salesforce.auth.password, salesforce.auth.username, salesforce.auth.securityToken confirmed.

Fix

1. [Developer] Delete lines 191-196 from common-config.properties. Add:
salesforce.consumerKey=\${secure::sf.consumerKey} and
salesforce.consumerSecret=\${secure::sf.consumerSecret}
2. [Developer] In Mule connector XML: replace salesforce:oauth-user-pass-connection with
salesforce:oauth-client-credentials-connection referencing only consumerKey and consumerSecret.
3. [SF Admin] Setup → App Manager → CX360 Connected App → Edit → OAuth Policies → enable
Client Credentials Flow → set Run As = mulesoftintegration@nyaaa.com → Save
4. Deploy to CloudHub.

How to verify: After deploy → trigger CX360 data sync → check CloudHub logs confirm auth succeeds → verify a sample record updated in Salesforce.

Owner Mulesoft Developer + SF Admin

■ TECHNICAL ITEMS — Action by June 2027

T5. Mulesoft ers-transfer-prc — Payment Events May Drop Silently

BY JUNE 2027

Business Impact Reciprocal, reimbursement, and facility payment events stop processing with no error or alert.

Verified ✓ ers-transfer-prc/src/main/mule/ers-transfer-prc-api.xml: 3 salesforce:subscribe-channel-listener
elements at lines 194, 243, 259 confirmed.

Fix

1. Open src/main/mule/global.xml lines 15-19 — the salesforce:jwt-connection block.
2. Check whether exists inside the connection block.
3. If missing, add it inside the salesforce:jwt-connection element.
4. Deploy and verify.

How to verify: In CloudHub → Monitoring → confirm all 3 channel listeners show active subscriptions after a simulated restart. No SUBSCRIPTION_DROPPED events in logs.

Owner Mulesoft Developer

■ VERIFY REQUIRED — Confirm Before October 2026

V1. Mulesoft aaa-wcny-breadfinancial-sf-bulk-papi — Production Status
Unknown

BY OCTOBER 2026

Business Impact

BreadFinancial SF integration uses the same username-password OAuth pattern being retired. If deployed to production, it will break in Winter '27.

Verified

✓ sftpSfGlobalConfig.xml: salesforce:oauth-user-pass-connection confirmed. Active credentials in common-config.properties point to test.salesforce.com (sandbox only). prod-config.yaml is empty — no production credentials configured in code.

Fix

- 1. Confirm with Mulesoft team: is this project deployed to a production CloudHub environment?
- 2. If YES — migrate same as T2/T3: replace salesforce:oauth-user-pass-connection with salesforce:jwt-connection using salesforce-ers-sys/src/main/mule/global.xml lines 33-39 as template.
- 3. If NO (sandbox only) — document that decision. No further action required for Winter '27.

How to verify: Check CloudHub Runtime Manager — if aaa-wcny-breadfinancial-sf-bulk-papi appears as a deployed application in a production environment, it must be migrated before October 2026.
