FINANCE DEPARTMENT GUIDE

FleetPulse Accounting Module

A practical guide for reviewing Work Order Adjustments, understanding billing, and using AI-powered analytics to control costs — written for the Finance team.

Version: 2.7 · **Date:** April 2026 · **Audience:** Finance / Accounting · **App:** https://fslapp-nyaaa.azurewebsites.net

1 What Is FleetPulse and How Does It Help You?

FleetPulse is AAA WCNY's internal dashboard that connects directly to Salesforce Field Service data. Before FleetPulse, reviewing a Work Order Adjustment meant opening Salesforce, finding the work order, cross-checking mileage on Google Maps, calculating dollar impact by hand, and deciding without seeing the full picture. **FleetPulse eliminates all of that manual work.**

📍

GPS MILEAGE VERIFICATION

Every WOA is automatically checked against GPS data recorded in Salesforce. The system compares what the garage claims vs. what the driver's phone actually recorded. No manual Google Maps checking — it's already done for you.

GOOGLE MAPS ROUTE VIEW

Every WOA shows an embedded Google Maps route with the truck's starting point, the member's breakdown location, and the tow destination — with distance labels on each segment. You can see the route at a glance without opening a separate browser tab.

💰

AUTOMATIC TOLL DETECTION

The system checks whether the route passed through known toll roads and flags the WOA with a toll icon. If a garage claims toll reimbursement (product code TL), the map will show whether the route actually used a toll road.

✦

AI ISSUE IDENTIFICATION

An AI model reads every WOA and the analytics data, identifies patterns of overbilling, spots garages with unusual claim rates, and writes a plain-English summary of what's happening and what to do about it. It works while you work.

WHAT FLEETPULSE REPLACES

Without FleetPulse: open Salesforce → find the SA → open Google Maps → manually measure route → calculate mileage delta → guess at dollar impact → decide blind.

With FleetPulse: open the WOA → read the auditor summary → look at the map → go to Salesforce to act. The entire analysis is already done. Your job is to evaluate it and decide.

2,580	$38,838	$14,761	75%	645
WOAS IN SYSTEM	TOTAL REQUESTED BY GARAGES	OUTSTANDING DELTA TO RESOLVE	AUTO-APPROVED BY RULES ENGINE	NEED YOUR REVIEW

2 Logging In

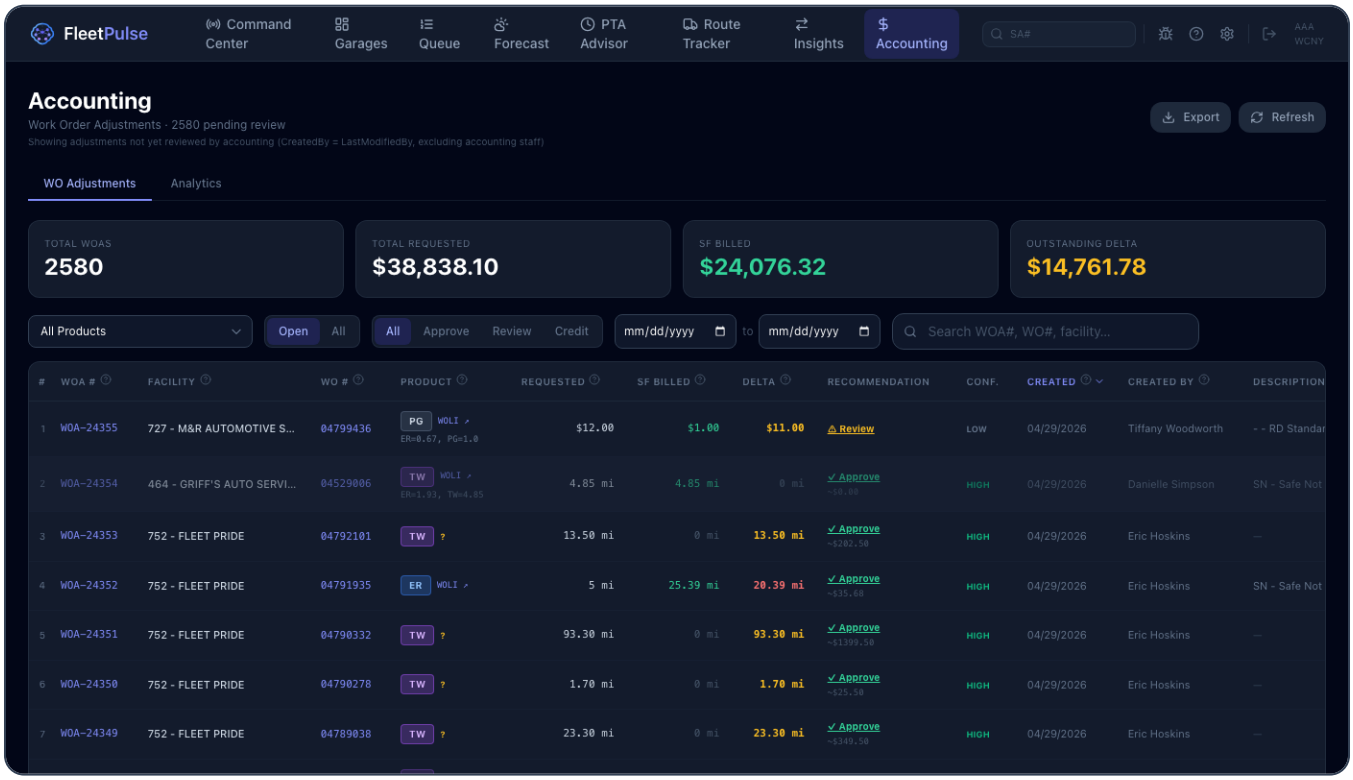
Open your browser and go to: **https://fslapp-nyaaa.azurewebsites.net**

1. **Enter your credentials**
   Username is your AAA email (e.g., dbrown@nyaaa.com). Enter your password. Click **Sign In**.

2. **You land directly on Accounting**
   Finance accounts go straight to the Accounting module. All other sections (Command Center, Garages, Dispatch) are not accessible — only Accounting.

3. **To log out**
   Click the logout arrow (→) in the top-right corner of the navigation bar.

3 The WOA List — Your Daily Work Queue



The Accounting module — WOA list showing 2,580 adjustments with totals, filters, and status per row.

The WOA list is your main workspace. Each row is one billing adjustment submitted by a garage. The summary cards at the top tell you the scope of the work:

- **Total WOAs: 2,580** — total open adjustments waiting for review
- **Total Requested: $38,838.10** — the total dollar amount garages are claiming
- **SF Billed: $24,076.32** — what Salesforce shows we've already paid them
- **Outstanding Delta: $14,761.78** — the gap you need to resolve (approve or deny)

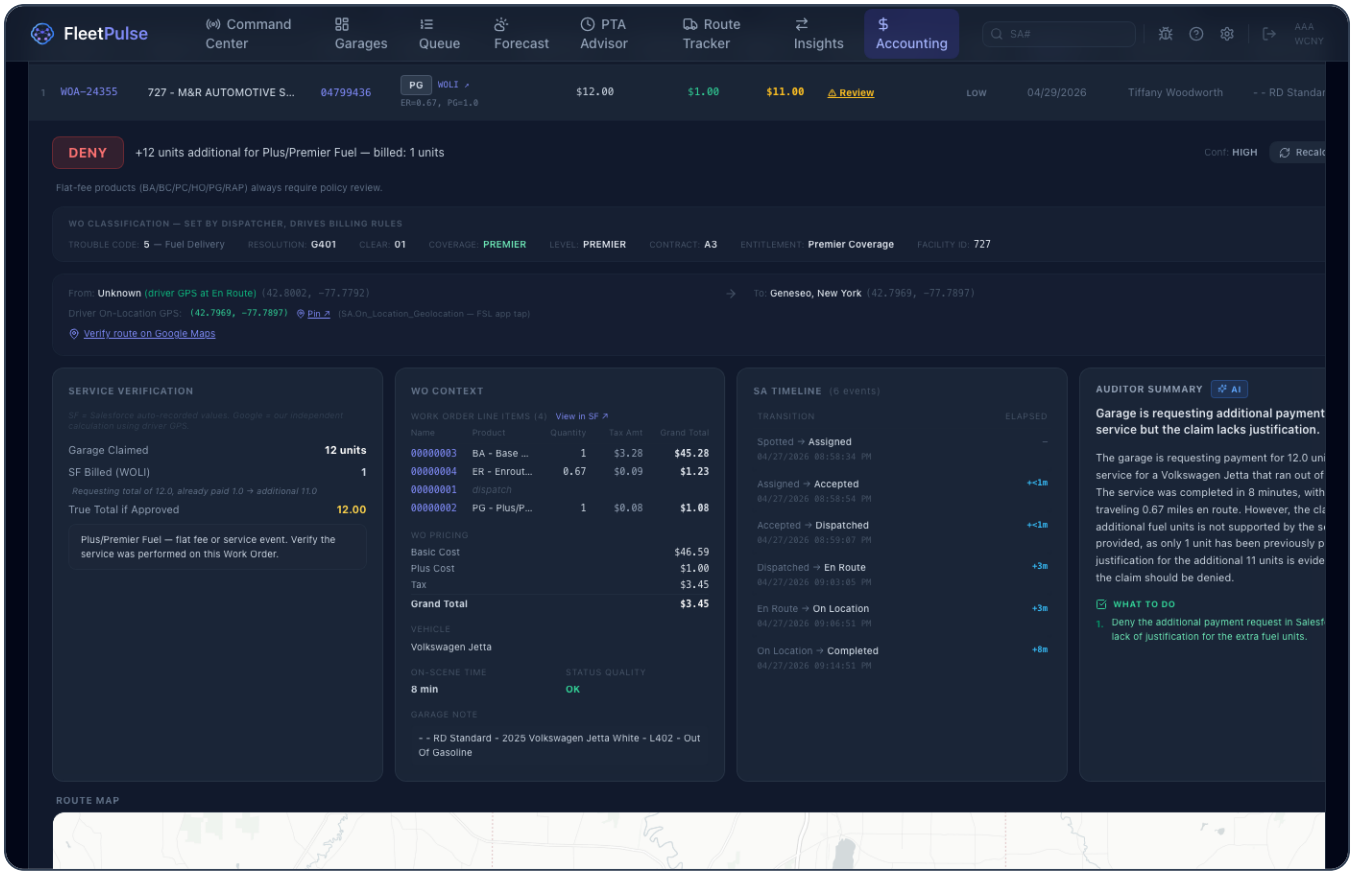
Reading Each Row

Column	What it means	Example
WOA #	Unique ID for this billing dispute. Clicking it opens the record directly in Salesforce.	*WOA-24355*

Facility	The garage that submitted the adjustment.	*727 - M&R Automotive*
WO #	The original Work Order in Salesforce this adjustment is against.	*04799436*
Product	Service type being adjusted (ER = en route miles, TW = tow miles, BA = battery, etc.)	*PG, ER, TW*
Requested	Total the garage claims they are owed.	*$12.00 or 14.2 mi*
SF Billed	What Salesforce shows we already paid.	*$1.00 or 10.5 mi*
Delta	The difference — the additional amount the garage wants. This is highlighted in amber if it's significant.	*$11.00*
Recommendation	✓ **Approve** = system validated this claim. ⚠ **Review** = system flagged a discrepancy for human decision.	*⚠ Review*
Conf.	Confidence level of the recommendation: HIGH / MEDIUM / LOW. LOW means data was incomplete — pay extra attention.	*LOW*

4 Opening a WOA — The Audit Panel

Click anywhere on a row (not the WOA number link) to expand the full audit panel inline. This is where you see everything the system found.



The expanded audit panel — shows the REVIEW recommendation, service verification, WO line items, SA status timeline, and the AI auditor summary.

What you see in the audit panel

Service Verification (left column)

- **Garage Claimed** — what the tech wrote on the work order
- **SF Billed (WOL)** — what Salesforce shows was paid
- **True Total If Approved** — what the final amount would be
- System reasoning in plain English below the numbers

SA Timeline (middle column)

- Full status history: Assigned → Dispatched → En Route → On Location → Completed
- Exact timestamps for each transition
- Time elapsed between each step — critical for E1/MI time claims

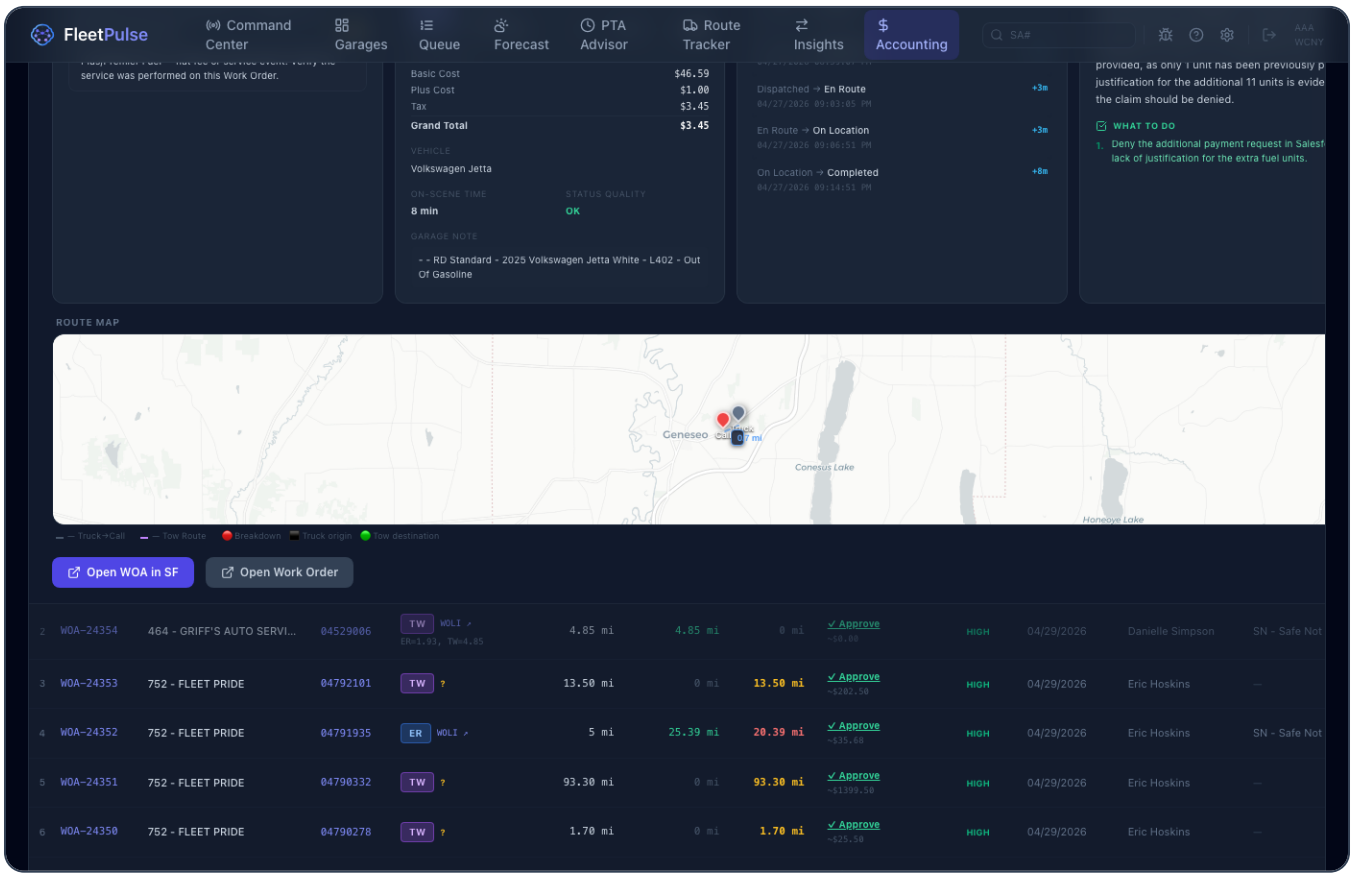
WO Context (line items)

- Every product billed on the original work order
- Quantity, rate, subtotal for each line
- Grand total and invoiced amount — what we actually paid

Auditor Summary (right column)

- Plain-English explanation of what the system found
- If AI is active: richer analysis with fraud signals, anomalies, and specific "What to do" guidance
- This is the most important card — read it first

The Route Map — Visual Mileage Check



The route map — Google Maps showing the truck GPS location (grey), member breakdown (red), tow destination (green), with distance labels on each segment. The "Open WOA in SF" button links directly to the Salesforce record.

The map shows the actual geography of the service call. Use it to sanity-check the mileage claim:

- **Grey marker** — where the truck was when it went En Route (GPS from driver's mobile app or Towbook)
- **Red marker** — the member's breakdown location
- **Green marker** — tow destination (if applicable)
- **Distance labels** on each route segment show the actual miles between points
- 💰 **Toll icon** — appears if the system detected a toll road on the route (relevant for TL claims)

> **HOW TO USE THE MAP TO MAKE A DECISION**
> If the garage claims 22 miles but the map shows the truck was 12 miles from the call location — that's a red flag. If the map shows a complex route through construction or a detour that adds distance, that supports the claim. The map removes ambiguity. You're not guessing — you're looking at the actual geography.

Taking Action — Going to Salesforce

FleetPulse is your **review and analysis tool**. The actual decision is recorded in Salesforce. At the bottom of the audit panel, you will see two buttons:

🔗 Open WOA in SF

Opens the Work Order Adjustment record in Salesforce directly. This is where you approve or deny the adjustment. Use this after reviewing the FleetPulse audit to record your decision.

🔗 Open Work Order

Opens the original Work Order in Salesforce. Use this if you need additional context about the service call, member information, or to contact the garage for clarification.

THE TWO-STEP WORKFLOW

Step 1 — Review in FleetPulse: Read the audit panel. Check the map. Look at the mileage ratios and timeline. Understand what happened.

Step 2 — Act in Salesforce: Click "Open WOA in SF." Approve or deny in Salesforce. Add a note explaining your decision. That's it.

5 Making Your Decision

When to approve, when to question

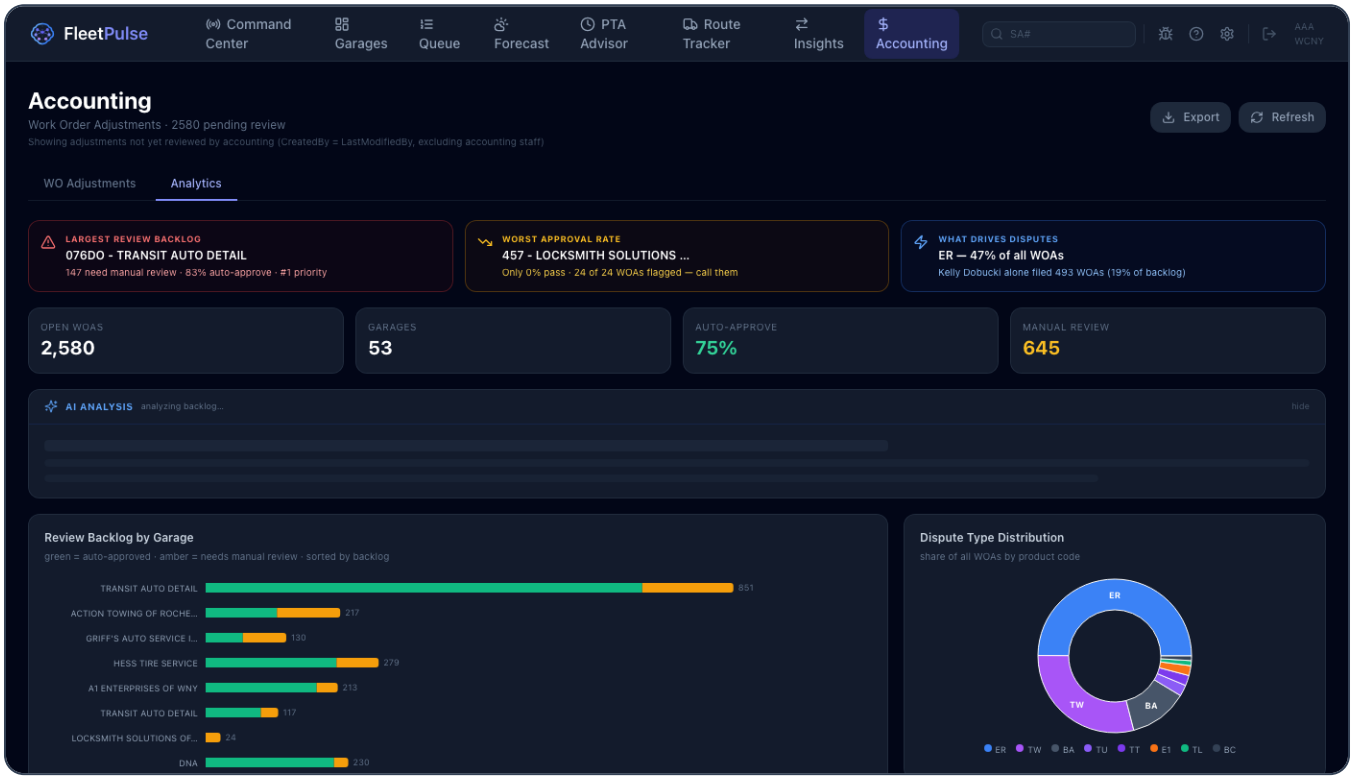
Situation	What it means	Recommended action
Claimed miles within 10% of SF recorded	GPS can lag slightly — minor variances are normal	Approve in Salesforce
Claimed 10–30% over SF estimate	Plausible if route had detours, construction, bridge/highway variations	Check the map. If route makes sense, approve.
Claimed more than 30% over SF estimate	Significant discrepancy — needs explanation	Open WOA in SF — request clarification from garage
E1 overtime claim over 90 minutes	E1 is capped at 90 min by contract	Deny the excess — approve up to cap
Delta = $0 (same as billed)	No financial change — admin correction only	Auto-approved — no action needed
Delta under $5	Below materiality threshold	Auto-approved — no action needed
Claim ratio over 200% of SF recorded	Garage claiming more than double what GPS shows	Deny in Salesforce — escalate if this repeats
Toll claim (TL product) with toll icon on map	Route confirmed to pass a toll road	Approve if amount is reasonable
Toll claim (TL) with no toll icon on map	System found no toll road on the route	Request receipt or explanation from garage

Product Codes — What service is being billed?

Code	Service	Measured by	Common reason for adjustment
ER	En Route (travel to member)	Miles from garage to breakdown	GPS recorded fewer miles than actual route — 47% of all WOAs
TW	Tow miles	Miles from breakdown to destination	Tow destination was farther than SF estimated — 28% of all WOAs
TU / TT	Tow variants (utility, tandem)	Miles — same as TW	Heavy/specialty equipment; higher per-mile rate
E1 / E2	Extended time / Overtime	Minutes on location beyond standard	Job took longer than normal (locked out, member not ready)
MI	Miscellaneous / Wait time	Minutes	Waiting for police clearance, traffic delay, etc.
BA / BC	Battery service / charge	Flat fee	Rarely adjusted — usually auto-approved
TL	Tolls / Parking	Dollar amount	Garage incurred toll costs on route
PG / HO	Plus/Premier Fuel; Hook-up	Flat fee	Member benefit tier; special equipment

6 Analytics — Understanding the Big Picture

Click the **Analytics** tab to shift from reviewing individual WOAs to understanding patterns across all of them. This is where the system's intelligence is most visible.



Analytics view — three intelligence cards at top (largest backlog, worst approval rate, what drives disputes), summary KPIs, AI analysis section, garage backlog chart, and dispute type donut chart.

The Three Intelligence Cards

LARGEST REVIEW BACKLOG

076DO – Transit Auto Detail — 147 need manual review · 83% auto-approve · #1 priority
This tells you which garage is generating the most work for your queue. Transit Auto Detail has 851 total WOAs but most pass the rules engine (83% auto-approve). The 147 that need review should be your first priority because of volume.

WORST APPROVAL RATE

457 – Locksmith Solutions — Only 0% pass · 24 of 24 WOAs flagged — call them
This is a red flag. A garage with 0% pass rate means every single WOA they submitted was flagged by the rules engine. This is either a systematic billing problem or the garage doesn't understand how to submit accurate claims. This needs a conversation with that garage.

WHAT DRIVES DISPUTES

ER — 47% of all WOAs · Kelly Dobucki alone filed 493 WOAs (19% of backlog)
En Route miles are the #1 source of billing disputes. Nearly half of all WOAs are about the miles a driver traveled to reach the member. Understanding WHY ER miles are disputed (GPS lag, route differences) helps you make better decisions on individual cases.

Garage Backlog Chart

The horizontal bar chart shows every garage ranked by WOA volume. Each bar has two colors:

- **Green segment** — WOAs that the system auto-approved (no action needed from you)
- **Amber segment** — WOAs that need your manual review

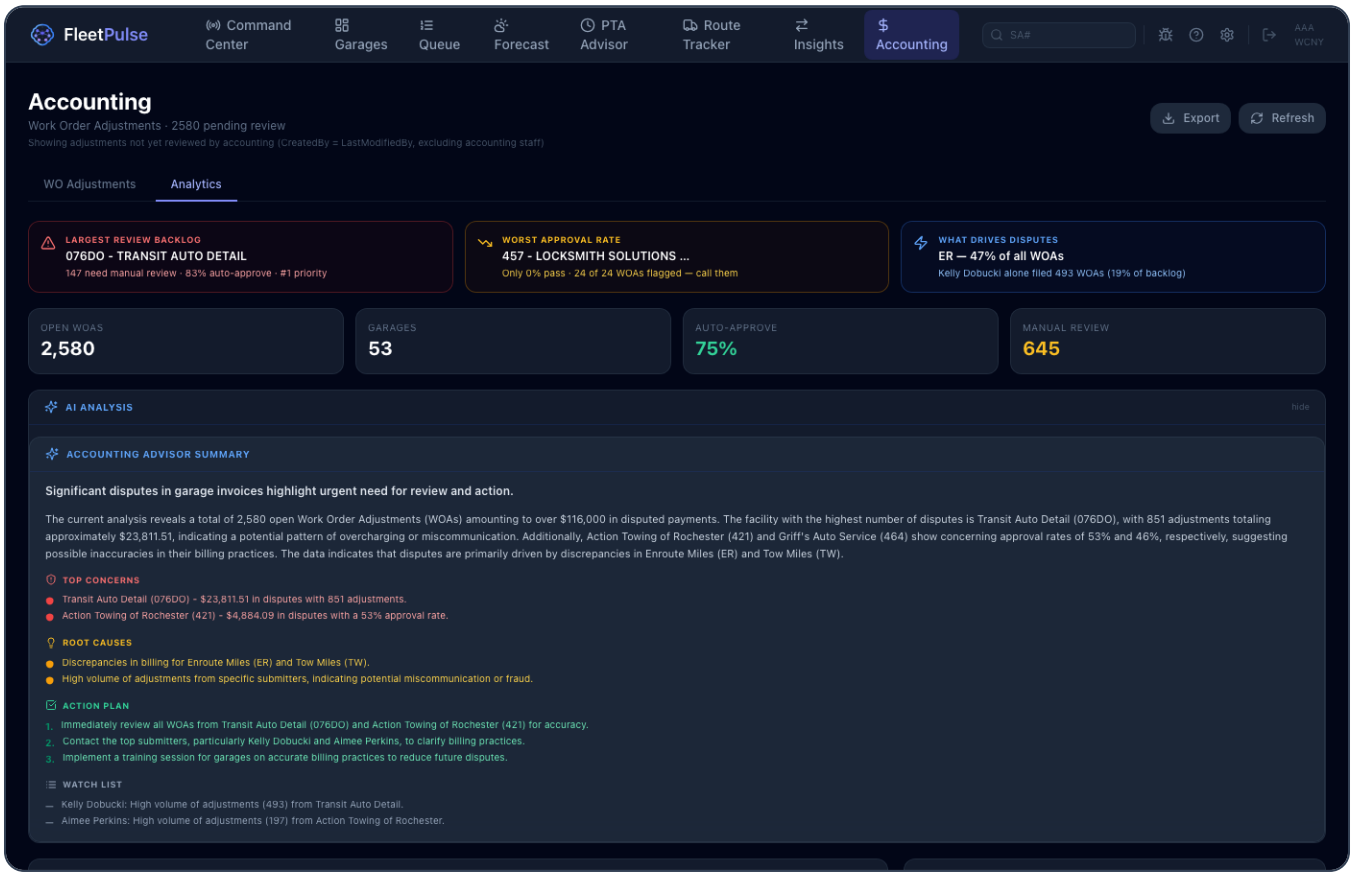
A garage with a large amber segment relative to green means their claims are frequently not passing the rules engine — worth a closer look at their billing practices.

Dispute Type Chart (Donut)

The donut chart on the right shows the share of all WOAs by product code:

- ER **1,224 WOAs (47%)** — En Route miles are the dominant dispute category
- TW **713 WOAs (28%)** — Tow miles second most common
- BA **303 WOAs (12%)** — Battery service; usually flat-fee, often auto-approved

7 AI Analysis — Your Accounting Advisor



The AI Accounting Advisor Summary — automatically analyzes 2,580 WOAs and generates top concerns, root causes, an action plan, and a watch list of individuals to investigate.

The AI Analysis card loads automatically when you open Analytics. It reads the entire WOA backlog — all 2,580 records — and surfaces patterns that would take hours to find manually. As an accountant, this is your strategic briefing.

✦ AI WHAT THE AI ACCOUNTING ADVISOR TELLS YOU

Here is an example of the insight the AI provides (from the current backlog):

- **Top Concerns:** Transit Auto Detail ($22,811 in 851 disputes) and Action Towing of Rochester (421 WOAs at 53% approval rate) are the two highest-priority facilities.
- **Root Causes:** Discrepancies in ER and TW miles are the primary drivers. High volume from specific submitters (Kelly Dobucki: 493 WOAs) suggests possible miscommunication or billing pattern issues.
- **Action Plan:** Immediately review all WOAs from Transit Auto and Action Towing. Contact the top submitters to clarify billing practices. Implement a training session for garages on accurate mileage reporting.
- **Watch List:** Kelly Dobucki (493 WOAs from Transit Auto), Aimee Perkins (197 from Action Towing of Rochester).

How to use AI insights as an accountant

1. **Read the AI summary at the start of each week**
   The AI re-analyzes the full backlog every time you load Analytics. The Top Concerns change as WOAs are resolved. This is your priority list — start your review queue with the garages named here.

2. **Use the Watch List to target patterns**
   If the AI names a specific technician or submitter with high volume, filter the WOA list by that facility and sort by Created By. You can review all their submissions as a batch and look for consistent over-claiming.

3. **Use Worst Approval Rate to trigger garage outreach**
   A garage at 0% approval rate is not submitting accurate claims. Contact them with the specific WOA numbers the system flagged. Show them what the GPS data says vs. what they claimed. Most issues are training problems, not fraud.

4. **Monthly: export to Excel + share with Operations**
   Use the Export button to download all WOAs for the month. Share the garage backlog chart with your manager and flag any facility with a rising amber segment. Operations can follow up on dispatch and GPS issues that cause the disputes.

8 Daily Workflow & Exporting

Your recommended daily workflow

1. **Open FleetPulse → Accounting → WO Adjustments tab**
   Filter: **Open** + **Review**. These are the WOAs waiting for your decision. The count shows how many need attention today.

2. **Sort by Delta (highest first)**
   Work highest-dollar disputes first. A 30-mile tow at $3.50/mile ($105 delta) deserves more scrutiny than a 0.5-mile ER discrepancy ($1.25).

3. **Click each row → read Auditor Summary → check the map**
   The auditor summary tells you what the system found. The map gives visual confirmation. If both point the same way, your decision is straightforward.

4. **Click "Open WOA in SF" → approve or deny in Salesforce**
   Record your decision in Salesforce. Add a note for any denial or borderline case. The note is visible to the garage and creates your audit trail.

5. **Weekly: check Analytics → read AI summary**
   Review the three intelligence cards. Note any new entries on the Watch List. Identify garages with rising review rates and flag for Operations.

Filters

Filter	How to use it
Open / All	**Open** = unresolved WOAs (your queue). **All** = everything including resolved, for auditing past decisions.
Approve / Review / Credit	Sub-filter by the system recommendation. Start with **Review** — those are the ones flagged for human judgment.
Product type	Focus on one service category. ER and TW have the most volume and dollar impact.
Date range	Set to current month for monthly close. Set to last 90 days for trend analysis. All exports respect the active filter.
Search	Type a WOA number, WO number, or facility name to find a specific record instantly.

Exporting

- **Export button (top right)** — downloads the full filtered WOA list as Excel. All columns, all notes, formatted for analysis. Use for monthly close or sharing with your manager.
- **Individual WOA PDF** — available from within the audit panel. One-page calculation sheet with the map, timeline, auditor summary, and your decision. File this with payment authorizations.

> **IMPORTANT: FLEETPULSE IS THE ANALYSIS LAYER — SALESFORCE IS THE ACTION LAYER**
> Reviewing a WOA in FleetPulse does **not** record a payment or a decision. It gives you the information you need. You record the actual approval or denial in Salesforce. Think of FleetPulse as the research you do before signing off — and Salesforce as where you sign.
